One of the commonly used soil improvement methods for soft clay is vacuum preloading. This method has been successfully used in a number of countries for land reclamation and soil improvement work (Holtz, 1975; Chen and Bao, 1983; Choa, 1990; Jacob et al., 1994; Bergado et al., 1998; Chu et al., 2000). Sand drains and, more recently, prefabricated vertical drains (PVDs) have often been used to distribute vacuum load and discharge pore water.
