Early computer networks used cable to connect computers together in a wired network. Most modern networks use wireless (wi-Fi) as the main connection media and networks tend to be a mixture of wired and wireless. The diagram below shows a wired Ethernet network. To work each device must be connected to a Ethernet hub or switch.

Computer Networking Complete Course - Beginner to Advanced

A computer network is the interconnection of various devices, responsible for sending or receiving media or data. These devices are known as hosts and are connected using a number of paths. There are also other network devices like, routers, hubs, bridges, and switches, which are responsible for the communication between two different devices.
