Ethical practice in engineering is critical for ensuring public trust in the field and in its practitioners, especially as engineers increasingly tackle international and socially complex problems that combine technical and ethical challenges. This report aims to raise awareness of the variety of exceptional programs and strategies for improving engineers' understanding of ethical and social issues and

provides a resource for those who seek to improve ethical development of engineers at their own institutions. This publication presents 25 activities and programs that are exemplary in their approach to infusing ethics into the development of engineering students. It is intended to serve as a resource for institutions of higher education seeking to enhance their efforts in this area.

Energy is at the top of the list of environmental problems facing industrial society, and is arguably the one that has been handled least successfully, in part because politicians and the public do not understand the physical technologies, while the engineers and industrialists do not understand the societal forces in which they operate. In this book, Allan

Mazur, an engineer and a sociologist, explains energy technologies for nontechnical readers and analyses the sociology of energy. The book gives an overview of energy policy in industrialised countries including analysis of climate change, the development of electricity, forms of renewable energy and public perception of the issues. Energy is a key component to environment policy and to the workings of industrial society. This novel approach to energy technology and policy makes the book an invaluable inter-disciplinary resource for students across a range of subjects, from environmental and engineering policy, to energy technology, public administration, and environmental sociology and economics.

real-science sci-fi for many years . . . utterly compelling."--The Wall Street Journal The inspiration for the major motion picture Six days ago, astronaut Mark Watney became one of the first people to walk on Mars. Now, he's sure he'll be the first person to die there. After a dust storm nearly kills him and forces his crew to evacuate while thinking him dead, Mark finds himself stranded and completely alone with no way to even signal Earth that he's alive--and even if he could get word out, his supplies would be gone long before a rescue could arrive. Chances are, though, he won't have time to starve to death. The damaged machinery, unforgiving environment, or plain-old "human error" are much more likely to kill him first. But Mark isn't ready to give up yet. Drawing on his ingenuity, his engineering skills--and a relentless, dogged

refusal to quit--he steadfastly confronts one seemingly insurmountable obstacle after the next. Will his resourcefulness be enough to overcome the impossible odds against him? NAMED ONE OF PASTE'S BEST NOVELS OF THE DECADE "A hugely entertaining novel [that] reads like a rocket ship afire . . . Weir has fashioned in Mark Watney one of the most appealing, funny, and resourceful characters in recent fiction."--Chicago Tribune "As gripping as they come . . . You'll be rooting for Watney the whole way, groaning at every setback and laughing at his pitchblack humor. Utterly nail-biting and memorable."--Financial Times

The Urban Climate Change Research Network's Second Assessment Report on Climate Change in Cities (ARC3.2) is the second in a series of global, science-based reports to examine climate risk, adaptation, and mitigation efforts in cities. The book explicitly seeks to explore the implications of

changing climatic conditions on critical urban physical and social infrastructure sectors and intersectoral concerns. The primary purpose of ARC3.2 is to inform the development and implementation of effective urban climate change policies, leveraging ongoing and planned investments for populations in cities of developing, emerging, and developed countries. This volume, like its predecessor, will be invaluable for a range of audiences involved with climate change and cities: mayors, city officials and policymakers; urban planners; policymakers charged with developing climate change mitigation and adaptation programs; and a broad spectrum of researchers and advanced students in the environmental sciences.

Presented here for the first time and for meditation and emulation are the words and work of many environmental apostles. The words and work of each apostle are designed to delight and inspire the reader to begin or continue to lead a life of environmental action for conservation and contemplation of nature for spiritual succor in the age of climate change. All the usual suspects are here, such as St. Francis, Rachel Carson, Aldo Leopold, John Muir, Henry David Thoreau, and Judith Wright, but *New Lives of the Saints* emphasizes some aspects of their words and work often ignored or overlooked, such as Thoreau on swamps and Leopold on marshes. Also included are some unusual and unexpected environmental apostles, such as Walter Benjamin, Raymond Williams, Seamus Heaney, and Paul

Virilio, all of whom contributed to green thinking as this book shows. Other environmentally apostolic writers, such as Walt Whitman, Sidney Lanier, Lord Dunsany, H. P. Lovecraft, Felix Guattari and Kelly Barnhill, are also discussed. Beginning with two environmentally and animal friendly retellings of the legends of St. George and St. Margaret involving dragons, the book goes on to devote a chapter each to ten other environmental apostles as patron saints of a special type of environment or of an approach to environmental conservation and contemplation. These saints sing the song of the earth, including its swamps, marshes, bogs, fens, national parks, mountains, forests, oceans, seas, airs, rivers, reefs, trees, cities, peoples, places, plants, animals, and so on. They provide nurture for living a life of hope and symbiotic

livelihood living sacrally with the earth. New Lives of the Saints crosses the great divide between fiction and non-fiction and mixes the genres of story and essay. It is a groundbreaking work of environmental counter-theology for the symbiocene, the hoped-for age superseding the Anthropocene.

This book constitutes the refereed proceedings of the 13th International Conference on Software Process Improvement and Capability Determination, SPICE 2013, held in Bremen, Germany, in June 2013. This beautifully illustrated book provides a new interpretation of modern architecture and design in Germany during the heyday of the Bauhaus and the Werkbund, tracing modernism's lasting allure to its many manifestations of luxury. Robin Schuldenfrei casts the work of legendary figures such as Peter Behrens, Walter Gropius, and Ludwig Mies van der Rohe in an entirely different light, revealing the complexities and contradictions inherent to modernism's promotion and consumption. *Luxury and Modernism* shows how luxury was present in bold, literal forms in modern

designs--from lavish materials and costly technologies to deluxe buildings and household objects—and in subtler ways as well, such as social milieus and modes of living. While modernism was publicized as a fusion of technology, new materials, and rational aesthetics to improve the lives of ordinary people, it was often out of reach to the very masses it purportedly served. Schuldenfrei exposes the disconnect between modernism's utopian discourse and its luxury objects and elite architectural commissions. Despite the movement's egalitarian rhetoric, many modern designs addressed the desires of the privileged individual. Yet as Schuldenfrei demonstrates, luxury was integral not only to how modern buildings and objects were designed, manufactured, and sold, but has contributed to modernism's

appeal to this day. Featuring stunning color images throughout, *Luxury and Modernism* provides an entirely new look at one of the most celebrated and influential eras in the history of architecture.

The 15th Passive and Low Energy Architecture (PLEA) conference considered the issues of sustainability and environmental friendliness at the city scale. Some 150 papers address the many and varied questions faced by architects and planners in reducing the impact on the environment of cities and their buildings.
