Language and the way that people communicate has evolved over time, now you can learn how to effectively use your voice in the most effective way possible in order to get your message across. Every time we open our mouths, we have an effect on ourselves and the way others perceive us. The ability to speak clearly and confidently can make or break a presentation, an important meeting, or even a first date. Now, with the advent of Skype, YouTube, podcasting, Vine, and any number of reality talent competitions, your vocal presence has never been more necessary for success or more central to achieving your dreams. Roger Love has over 30 years of experience as one of the world's leading authorities on voice. Making use of the innovative techniques that have worked wonders with his professional clients, Love distills the best of his teaching in Set Your Voice Free, and shares exercises that will help readers bring emotion, range, and power to the way they speak. This updated edition incorporates what he's learned in the last 15 years as the Internet and talent competitions have

completely changed the role your voice plays in your life. These are the new essentials for sounding authentic, persuasive, distinctive, and real in a world that demands nothing less.

With the changing landscape of the transport sector, there are also alternative powertrain systems on offer that can run independently of or in conjunction with the internal combustion (IC) engine. This shift has actually helped the industry gain traction with the IC Engine market projected to grow at 4.67% CAGR during the forecast period 2019-2025. It continues to meet both requirements and challenges through continual technology advancement and innovation from the latest research. With this in mind, the contributions in Internal Combustion Engines and Powertrain Systems for Future Transport 2019 not only cover the particular issues for the IC engine market but also reflect the impact of alternative powertrains on the propulsion industry. The main topics include: • Engines for hybrid powertrains and electrification • IC engines • Fuel cells • E-machines • Air-path and other technologies achieving performance and fuel economy benefits • Advances and improvements in combustion and ignition systems • Emissions regulation and their control by engine and after-treatment • Developments in real-world driving cycles • Advanced boosting systems • Connected powertrains (AI) • Electrification opportunities • Energy conversion and recovery systems • Modified or novel engine cycles • IC engines for heavy duty and off highway Internal Combustion Engines and Powertrain Systems for Future Transport 2019 provides a forum for IC engine, fuels and powertrain experts, and looks closely at developments in powertrain technology required to meet the demands of the low carbon economy and global competition in all sectors of the transportation, off-highway and stationary power industries.
