Richard Vietor shows how governments set direction and create the climate for a nation's economic development and profitable private enterprise. Drawing on history, economic analysis, and interviews with executives and officials around the globe, he provides examinations of different government approaches to growth and development.

The best way to select emerging markets to exploit is to evaluate their size or growth potential, right? Not according to Krishna Palepu and Tarun Khanna. In *Winning in Emerging Markets*, these leading scholars on the subject present a decidedly different framework for making this crucial choice. The authors argue that the primary exploitable characteristic of emerging markets is the lack of institutions (credit-card systems, intellectual-property adjudication, data research firms) that facilitate efficient business operations. While such "institutional voids" present challenges, they also provide major opportunities-for multinationals and local contenders. Palepu and Khanna provide a playbook for assessing emerging markets' potential and for crafting strategies for succeeding in those markets. They explain how to: · Spot institutional voids in developing economies, including in product, labor, and capital markets, as well as social and political systems · Identify opportunities to fill those voids; for example, by building or improving market institutions yourself · Exploit those opportunities through a rigorous five-phase process, including studying the market over time and acquiring new capabilities Packed with vivid examples and practical toolkits, *Winning in Emerging Markets* is a crucial resource for any company seeking to define and execute business strategy in developing economies.

Presents the comprehensive framework of analytical techniques to help a firm analyze its industry as a whole and predict the industry's future evolution, to understand its competitors and its own position ...

The technological revolution has reached around the world, with important consequences for business, government, and the labor market. Computer-aided design, telecommunications, and other developments are allowing small players to compete with traditional giants in manufacturing and other fields. In this volume, 16 engineering and industrial experts representing eight countries discuss the growth of technological advances and their impact on specific industries and regions of the world. From various perspectives, these distinguished commentators describe the practical aspects of technology's reach into business and trade.

The Business Environment of Europe is the first textbook to provide a complete overview of Europe's business landscape, examining the region's diverse economies and government policies within historical, political, and cultural contexts. This well-researched text examines the European Union and select European nations, and leads students to a full understanding of the structure and dynamics of specific industries, the impact of globalization on European companies, and the future challenges facing the region's business environment. Numerous tables, maps, figures, case studies and chapter-specific bibliographies support students with little background knowledge of the subject, and lead them to total mastery of the material. Ideal for business students seeking background on the historical and cultural foundations of European business,

and for international studies students seeking specific information on European governments, policies and economics, this introductory textbook provides a comprehensive and interdisciplinary overview of the subject.

'Beyond Open Skies' offers a systematic comparative analysis of the legal and policy dimensions of airline deregulation by federal fiat in the United States and by supranational collaboration in the European Union. The book draws upon a variety of sources, including very recent developments in U.S. and EC international aviation law, policy, and diplomacy, to propose a genuine multilateral air transport system. It examines the potential of the 'open skies' initiative, in the aftermath of the new U.S./EC air transport agreement, to inspire a genuine globalization of the world's air transport industry in such crucial aspects as the following: cabotage; ownership and citizenship requirements; route selection; airline identity; capacity; pricing regimes; competition and public aid; regulatory harmonization; labor laws; provisions for charter and/or cargo transportation; fair operation of and access to computer reservations systems; authorization of code-sharing arrangements; alliances and antitrust immunity; and dispute resolution.

Megacities are a new phenomenon in history. The fact that many of them are in emerging countries deepens the challenges of governing these spaces. Can these vast, complex entities, rife with inequalities and divisions, be governed effectively? For researchers, the answer has often been no. The approach developed in this work focuses on the material city and its institutions and shows that, without recourse to a big new theory, urban leaders have devised mechanisms of ordinary government. They have done so through the resolution of practical and essential problems: providing electricity, drinking water, sanitation, transportation. Three findings emerge from this book. Infrastructure networks help to structure cities and function as mechanisms of cohesion. Megacities become more governable if there is a legitimate authority capable of making choices. Finally, anarchic urbanisation has its roots in systems of land ownership, in inadequate urban planning and in the practices of developers and local actors. In the originality of its hypotheses and the precision of the analyses carried out in the four case study cities of Shanghai, Mumbai, Cape Town and Santiago de Chile, this work is addressed to all those interested in the life of cities: politicians, local and central government officials, executives in urban companies, researchers and students.

This book discusses how computers are shaping contemporary society, with a tight focus on the role of corporations and governments. It is aimed at government policymakers interested in economic development and at private-sector managers who routinely make decisions to acquire and use information technology, now a worldwide expenditure of over \$2 trillion annually. The book will also interest a wide range of academics concerned with the sociology, history, economics, and the effects of IT on contemporary society, and to the general trade market.

In conjunction with Singapore's 50th birthday in August 2015, *50 Years of Environment: Singapore's Journey Towards Environmental Sustainability* takes the reader through Singapore's environmental journey over the past 50 years, to its present day challenges and solutions, and seeks to explore what lies ahead for Singapore's environmental future. This book is divided into three parts. The first, drawn largely from the book *Clean, Green and Blue: Singapore's Journey Towards Environmental and Water Sustainability*, will explore the historical developments in Singapore's environmental journey and the development of NEWater. The second part will be a collection of essays that examine the present environmental challenges that Singapore faces and the ways in which it is addressing those issues through community engagement, international engagement, research and technology, and industry solutions in order to develop sustainable strategies and solutions. Part Three will bring the book to a close by tying the historical and contemporary threads together and discusses the future challenges for Singapore's environment.

Contents: Endorsements Preface About the Editor About the Contributors Appreciation Journey to the Present: Reflections on Singapore's Environmental Journey (Tan Yong Soon, Lee Tung Jean and Karen Tan) Cleaning the Land and Rivers (Tan Yong Soon, Lee Tung Jean and Karen Tan) Applying Economic Principles to Environmental Policy (Tan Yong Soon, Lee Tung Jean and Karen Tan) The Search for NEWater: The Singapore Water Story (Lee Ek Tieng) Environmental Planning For Sustainable Development (Tan Yong Soon) Present Challenges: Frontier Research in Environment and Water: Integrated Research Approach for Sustainable Solutions (Lee Lai Yoke and Ong Choon Nam) Energy Transitions — Energy Efficiency and Renewable Energy Challenges in the Tropics (Nilesh Y Jadhav, Subodh Mhaisalkar and Hans B (Teddy) Püttgen) Developing a Vibrant Sustainable Energy Industry (Edwin Khew, Christophe Inglin, Sanjay Kuttan and Low Kian Beng) Community Engagement to Promote Environmental Ownership and Secure Our Future (Chew Gek Khim) Island in the World: Singapore's Environment and the International Dimensions (Simon Tay and Cheong Poh Kwan) Moving into the Future: Environmental Sustainability and Sustainable Development (Tan Yong Soon and Kwek Leng Joo)

Readership: General readers who are interested in learning more about Singapore's environmental journey, present day developments, and the potential environmental challenges in the future. Key Features: Contains a great variety of contributions from leading individuals in the public, private and people sectors, and leading academics at the forefront of environmental research and development Provides a good overview of Singapore's history in improving environmental conditions, present challenges, and possible future developments for Singapore's environment Suitable for a variety of readers, ranging from the general reader to academics and practitioners

Keywords: Singapore; Environment; Sustainability; R&D

Review: "Singapore's transformation from an impoverished and polluted island to the world's beacon of environmental progress has been nothing short of miraculous. Miracles, however, are hard to repeat elsewhere, therefore, we are very fortunate that Singapore's environmental transformation was not at all a miracle. Instead, it happened thanks to clever and consistent strategies and brilliant execution. Over the last 30 years, as I got to gradually know the Singapore miracle workers and their methods, I often prayed that other jurisdictions would learn the steps involved. This book about the Singapore miracle provides an opportunity for environmental leaders everywhere to extract the policies and procedures they need to bring about progress in their own jurisdiction." Dr Andrew Benedek Founder, Chairman and CEO of ZENON Environmental Inc. and Anaergia Inc. Winner of the inaugural Lee Kuan Yew Water Prize in 2008 "For a seriously resource-constrained nation, Singapore has come a long way since its independence in 1965. Very few people, if any, 50 years ago would have predicted that this city-state would become the envy of the world by 2015. While everyone knows and admires the remarkable progress of the past half century, not many people are familiar with the achievements in the field of environment and the enabling conditions that made this possible. One of the very few serious studies that is available is Tan Yong Soon's earlier book *Clean, Green and Blue: Singapore's Journey Towards Environmental and Water Sustainability*. The present text is a worthy complement that adds to the in-depth analysis of this important journey. The book is strongly recommended." Professor Asit K Biswas

Distinguished Visiting Professor Lee Kuan Yew School of Public Policy, Singapore and Co-founder, Third World Centre for Water Management, Mexico "This book charts a 50-year visionary journey that began on the right foot, with recognition that sustainable economic growth and a clean environment are mutually reinforcing goals. Over these decades, Singapore has moved from cleaning up the land and rivers, through controlling pollution and meeting water needs, to the current use of cutting-edge research and technology to build clean and renewable energy for the future. With the city-state now ranking near the top of the world in terms of environmental standards, the book offers many lessons for other countries looking for ways to meet the growing demand for water and energy while preserving a health-promoting environment." Dr Margaret Chan Director-General, World Health Organization "Singapore celebrates its 50th anniversary of nationhood in a milestone year as countries of the world come together to agree a climate-safe path to sustainable development. Since its establishment, Singapore has sought to leverage sound environmental stewardship and social engagement into prosperity and growth. Singapore has been remarkably successful. The 50 Years of Environment publication demonstrates how progressive policy such as ecologically sound natural resource management, incentives to innovate and emphasis on clean development are at the heart of this vibrant modern economy. This is a welcome addition to the global dialogue on development as a powerful case study for what is possible. As governments move towards a set of Sustainable Development Goals and a new, universal climate change agreement in Paris this year, the knowledge and experiences in this book showcase real world policy success and inspire the world." Ms Christiana Figueres Executive Secretary, UN Framework Convention on Climate Change "Singapore's success in becoming a developed country and, at the same time, taking good care of its environment, is a vindication of what we were trying to achieve at the 1992 Earth Summit. This important book explains how Singapore did it and outlines present and future challenges as Singapore continues its journey into environmental sustainability and sustainable development." Professor Tommy Koh Chairman, Preparatory Committee and Chairman, Main Committee UN Conference on Environment and Development 2006 Champion of the Earth, awarded by UNEP 2006 President's Award for the Environment, Singapore "Singapore is well known globally for its brilliant economic success story. It deserves to be equally well-known for its environmental success story. It is truly remarkable that unlike other successful economies, Singapore did not sacrifice its environment in pursuit of economic growth. This is why this book edited by Tan Yong Soon could not be more timely. The world can learn a lot of lessons from this volume." Professor Kishore Mahbubani Dean, LKY School of Public Policy, National University of Singapore, and author of *The Great Convergence: Asia, the West, and the Logic of One World* "With a population density of around 7,500 people to the square kilometre, Singapore is one of the most densely populated countries on Earth. This book of essays by some of those most closely involved shows how the country evolved through half a century of commitment and foresight into one of the world's most liveable cities with green spaces and fresh water and how it is addressing present environmental challenges to develop sustainable strategies and solutions. Others take notice and follow!" Lord Ronald Oxburgh Former Rector of Imperial College of Science, Technology and Medicine (1993–2000) Former Chairman of the UK House of Lords Select Committee on Science and Technology (2000–2004) Honorary President of the Carbon Capture and Storage Association

This book provides research assistance for 99 current and provocative issues students can use to write a brief argumentative paper. * Each jumpstart topic contains a photograph, chart, or drawing * Bibliography collects all book and audio-video selections used in the jumpstarts, and can be used for library collections
