Package 'plotKML' - cran.r-project.org
The purpose of the algorithm is, given a curve (trajectory) composed of line segments, to find a similar curve with fewer points. The algorithm defines 'dissimilar' based on the maximum distance between the original curve and the simplified curve. The simplified trajectory consists of a subset of the points that defined the original trajectory.

This function is a C adaptation of the distFrechet code from kmlShape package for use with a matrix or a dataframe so that the user can compute pairwise distances between all trajectories. It is highly recommended to use this function over frechetDist because it is a lot faster. Value A dist class object of size NxN, where N is rows number in the input data Author(s) Fernando Pérez-Sanz ...
