Any Perl/Tk application starts by creating the Tk MainWindow. You then create items inside the MainWindow, and/or create new windows called Toplevel s that also contain child items, before starting the MainLoop, which is the last logical statment in your program. You can also create more items and windows while you're running, using callbacks.

Initially, the tutorial will cover Tcl, Ruby, Perl and Python. Over time, additional languages may be added. Even if your own language isn't included, the chances are you'll still benefit; since all the languages use the same underlying Tk library, there's obviously a lot of overlap. It's also not a reference guide.
