Profiles of the Future was written in 1961 by prominent science fiction author Arthur Clarke. This time came after a tumultuous few decades for science and technology (not to forget the world wars): Einstein's special relativity. Anyone who has an active interest in what the future holds, which is just about everyone, makes predictions, extrapolates trends and postulates about the world ahead.

British science fiction writer Arthur C. Clarke formulated three adages that are known as Clarke's three laws, of which the third law is the best known and most widely cited. They are part of his ideas in his extensive writings about the future. These so-called laws are: When a distinguished but elderly scientist states that something is possible, he is almost certainly right.

An inquiry into the limits of the possible. Our problems on Jupiter, Mercury, Venus - conquering Time - transport in the future - overcoming gravity - communications across space - benevolent electronic brains. The range of this enthralling book is immense: from the re-making of the human mind to the vast reaches of the universe. Newly revised, even the remarkable events of the last decade have affected few of the exciting speculations by Arthur C. Clarke - a scientist whose expert and wide knowledge is matched only by his brilliant imagination.

"This book originally appeared in 1962 and was based upon essays written during the period 1959-1961. Since it was concerned largely with ultimate possibilities, and not with achievements to be expected in the near future, even the remarkable events of the last decade have dated it very little. ... what has changed--and in ways that no one could possibly have predicted--is our entire attitude toward the future, and especially toward technology as a whole. Profiles was one of the first samples of a deluge of books about the future ..." --from Preface to the Second Edition.

Examines the future potentials and directions of technological development and assesses the advantages and disadvantages of progress

A science fiction writer offers a glimpse of life in the twenty-first century with a visit to a law office run by computer, to baseball pitchers with bionic implants throwing 120-mph fastballs

An anthology of futuristic nonfiction essays by the best-selling author of 2001: A Space Odyssey spans more than sixty years of work in a collection, organized chronologically, that includes his prophetic predictions about geosynchronous satellites, space travel, and the Internet. Reprint. 20,000 first printing.

From Arthur C. Clarke, the brilliant mind that brought us 2001: A Space Odyssey, and Stephen Baxter, one of the most cogent SF writers of his generation, comes a novel of a day, not so far in the future, when the barriers of time and distance have suddenly turned to glass. When a brilliant, driven industrialist harnesses cutting-edge physics to enable people everywhere, at trivial cost, to see one another at all times—around every corner, through every wall—the result is the sudden and complete abolition of human privacy, forever. Then the same technology proves able to look backward in time as well. The Light of Other Days is a story that will change your view of what it is to be human. intelligent extraterrestrial life. This level of belief rivals that of belief in God. American Cosmic examines the mechanisms at work behind the thriving belief system in extraterrestrial life, a system that is changing and even supplanting traditional religions. Over the course of a six-year ethnographic study, D.W. Pasulka interviewed successful and influential scientists, professionals, and Silicon Valley entrepreneurs who believe in extraterrestrial intelligence, thereby disproving the common misconception that only fringe members of society believe in UFOs. She argues that widespread belief in aliens is due to a number of factors including their ubiquity in modern media like The X-Files, which can influence memory, and the believability lent to that media by the search for planets that might support life. American Cosmic explores the intriguing question of how people interpret unexplainable experiences, and argues that the media is replacing religion as a cultural authority that offers believers answers about non-human intelligent life.

London is one of the world ' s leading cities. It is home to an extraordinary concentration and diversity of people, industries, politics, religions and ideas, and plays an important role in our highly globalised and tightly networked modern world. What does the future hold for London? Investigating any aspect of the city ' s future reveals a complex picture of interrelations and dependencies. The London 2062 Programme from University College London brings a new, cross-disciplinary and highly collaborative approach to investigating this complexity. The programme crosses departmental boundaries within the university, and promotes active collaboration between leading academics and those who shape London through policy and practice. This book approaches the question of London ' s future by considering the city in terms of Connections, Things, Power and Dreams.

A mysterious glowing orb appears over Central Asia, ripping the Earth into conflicting eras of the past, present, and future, mingling UN peacekeepers from the year 2037 with military forces from past eras.
