We get the ratio from John John has 30 marbles, 18 of which are red and 12 of which are blue. We use the same ratio for Jane. Step 2: Solve the equation . Cross Multiply $3 \times x = 2 \times (20 - x)$ $3x = 40 - 2x$. Isolate variable x. John has 12 blue marbles. So, he has $12 - 8 = 4$ more blue marbles than Jane. Answer: John has 4 more blue marbles than Jane.

"Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.
