Sheep Management | HCC / Meat Promotion Wales

Ewes are seasonally polyestrous, cycling every 16–17 days during the breeding season. The major environmental factor controlling the estrous cycle is the photoperiod. Decreasing photoperiod after the summer solstice causes secretion of melatonin, which triggers the hypothalamus to produce gonadotropin-releasing hormone.

Reproductive Physiology of Sheep - Management and ...

Wool and sheepmeat production systems rely on the breeding ewe — how she is managed sets up the efficiency and profitability of both the ewe and weaner flock. Getting stocking rate right, weaner management, having the right infrastructure and an efficient use of labour are also big contributors to running an efficient and profitable sheep enterprise.

Sheep management and reproduction | Agriculture and Food

An intensive sheep production system usually refers to a closed system, or a system which exists in a feeding pen or a production system from pastures or a combination thereof. The final choice between the systems will largely depend on the owner and will therefore depend on preference, management level, existing facilities, and the area where he is farming.

Sheep production: Choose the right breed for your ...

The UK sheep industry makes best use of the different breeds, land and weather conditions in different areas of the country, by matching breeds and production methods to the area. The sheep industry includes lowland, hill and upland production.
