Respiratory System: Parts, Function, and Diseases

The respiratory system is the network of organs and tissues that help you breathe. It includes your airways, lungs, and blood vessels. The muscles that power your lungs are also part of the respiratory system. These parts work together to move oxygen throughout the body and clean out waste gases like carbon dioxide.

Read Book The Respiratory System At A Glance 3rd Edition

Let's start by having an overview of the respiratory system. The whole process starts when we breathe in (inhale) oxygen from the air. Oxygen travels through our nose, into our windpipes to our lungs. From our lungs, the oxygen travels through a capillary system which leads to our body tissues.

The cells of the human body require a constant stream of oxygen to stay alive. The respiratory system provides oxygen to the body's cells while removing carbon dioxide, a waste product that can be lethal if allowed to accumulate. There are 3 major parts of the respiratory system: the airway, the lungs, and the muscles of respiration.

Respiratory System | Interactive Anatomy Guide

The respiratory system works closely with the cardiovascular system to maintain a supply of oxygen to the working muscles. How does

greatly, depending on the size of the organism, the environment in which it lives and its evolutionary history.

Respiratory system - Wikipedia

Respiratory disease is a common and significant cause of illness and death around the world. In the US, approximately one billion common colds occur each year. A study found that in 2010, there were approximately 6.8 million emergency department visits for respiratory disorders in the U.S. for patients under the age of 18. In 2012, respiratory conditions were the most frequent

reasons for ...

Respiratory disease - Wikipedia

The respiratory system is an essential system of the body. It performs the task of gas exchange, allowing oxygen from the air to enter into the blood and releasing carbon dioxide from the blood to exit into the air. In fact, this is the system in your body where the inhalation of oxygen and the exhalation of carbon dioxide are done.
